

Adding Bead to Centre of Ring or Split Ring © Jane Eborall 2016

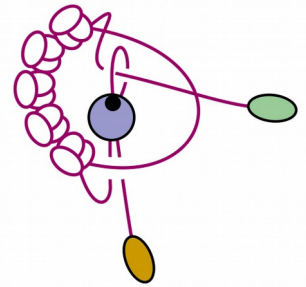

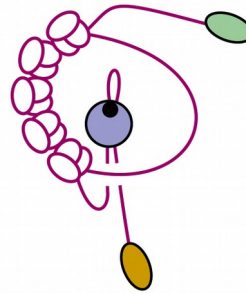

Work the doubles required by the pattern to the centre of the ring.

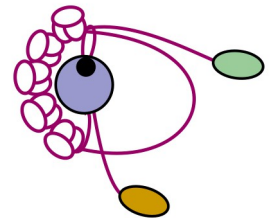

Pull a loop from the chain (or second shuttle) thread taking it **behind** the core thread and towards the centre of the ring/split ring.

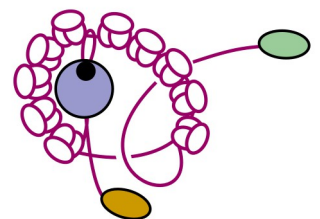

Add the bead to this loop and then take the **working** shuttle (shuttle 1) through this new loop.

Tighten the chain/second shuttle thread carefully – this can be adjusted later too.

Work the rest of the ring but before closing take the working shuttle **down** through the centre of the ring.

Close. Adjust tension on second shuttle/chain thread before starting next element - if required.
