

[Click here](#)

Needed – 2 colours number 20 thread (8 yards light coloured on shuttle one and 4 yards of dark on shuttle two). 9 beads size 7 (measuring 7 beads to 1" when laid along a ruler).

Note: for those who prefer front side/back side tatting the text in italics and red indicates where the worker needs to use the second half of the ds first. Please ignore if you don't want the added 'hassle'!!!!

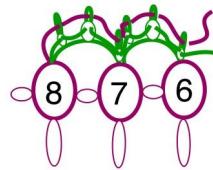

Abbreviations

| | | | |
|--------|---|-------|----------------------------------|
| R | ring | Ch | chain |
| p or - | picot | SR | Split ring |
| Cl | close | RW | Reverse work |
| DNRW | Do not reverse work | FP | False picot |
| vsp | Very small picot | + B | Add bead to picot before joining |
| btwn | between | T & C | Tie and cut |
| -- | Long picot to take the bead | SS | Switch shuttles |
| CTJ | continuous thread join. A simple technique which takes both threads back over part of the work without having to use a chain. This resembles a crocheted slip stitch. | | |

The CTJ is made by pulling the chain thread downwards through each vsp and picot on the previous 2 chains. As each loop is pulled down through the picot pass the working shuttle thread through this loop. Snug up the chain thread and continue to next vsp or ds. See below.

Work as instructions.

Pull the chain thread downwards through the first vsp and pass the working shuttle thread through this loop. Snug up the chain thread and continue doing the same through all ds and vsp on the two previous chains.

Please make sure that the second picot of each ring from ring 1 to ring 7 are large enough to hold the beads.
